

Söll Xenon® is available for Miller trained professional installers only.

Söll Xenon® Horizontal Lifeline System

Designed for industrial applications (crane runways, loading bays...) and roofing.

Söll Xenon is a high quality, durable system made of corrosion resistant stainless steel and is ideally suited to industrial applications like working on crane runways, loading bays and roofs. It's also very appropriate for water and food industry sectors.

It provides fall protection for up to seven workers across a maximum span of 20m (1X19 cable, 8mm wide), depending on the line configuration.

The Söll Xenon system can be installed on posts at the bottom level with dedicated components like intermediate brackets and curves for smooth sliding of the standard shuttle.

The system can also be installed for overhead usage with dedicated components like overhead intermediate brackets and curves as well as an overhead shuttle allowing for heavy usage with self retractable lifelines up to 20kg.

- Guarantees structural integrity and protects up to seven workers
- The standard and overhead shuttles have excellent sliding performance
- Conforms to EN 795: 01 standard
